double-stranded cDNA was ligated to a Draill adaptor [TGTTGGCTACTGG], digested and cloned into distinct Draill stees of the pME18S-FL3 vector [5' site CACTGTGTG, 3' site CACCATGTG]. Mold be used to isolate the cDNA insert. Size selection was performed to exclude fragments cl.5kb. Library constructed by Dr. Sumio Sugano (University of Tokyo Institute of Medical Science). Custom primers for sequencing: 5' end primer CGACCTCGAGAGAGA."

//note="Vector: lambda pSB; Site_l: BamHI; Site_2: ECORI; First strand cDNA was primed with an anchored XhOT-Oligo(dT) primer [5'GGAGATCGAGCGCGCAGGAGGAG(T)VN 3'; V=A,C,G; N=A,C,G,T] and then dG tailed. Second strand was primed with a BamHI-dC primer [5'AGAGACTCGGATCGGCCCCAATAATAATAATAAT(C) 3']. Double-stranded cDNA was then digested with BamHI and XhOI and directionally cloned into the BamHI and SalI sites of lambda pSB vector. Library went through one round of normalization. Library was constructed by Wei Yu at RIKEN of Japan (Carninci P. Westover A, Nishiyama Y, Ohsumi T, Itoh M, Negaoka S, Sasakih, Okazaki Y, Muramatau M, Schneider C, Hayashizaki Y, High efficiency selection of full-length cDNA by improved biotinylated cap trapper., DNA Res 4:1, 61-6. Eeb 28, 1997)"

Oncte—"Organ: pooled pancreas and spleen; Vector: poW-sPORT6; Site_1: Not!, Site_2: EcoRV (destroyed); RNA source anonymous pool of spleen and pancreas from 28 yo male. Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 1:5 kb, insert size range 1-2:5 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics Lracking code 025. Note: this is a NIH_MGC Library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .;

Funding for Cattle EST sequencing was provided by the USDA National
Funding for Cattle EST sequencing was provided by the USDA National
Funding for Cattle EST sequencing was provided by the USDA from
Kesearch Initiative, Project No. 98-35205-6644, and a grant from
the Japanese Ministry of Agriculture Fisheries and Forestry to
H.A.Lewin and J.E.Womack. Base-calling/Quality scores: PRRED form
Washington University Genome Center. Vector-trimming: Cross Match
from Washington University Genome Center PHRAP suite. This sequence
is vector free and at least 200bp in length.
Insert Length: 558 Std Error: 0.00
Plate: BS320033000 row: E column: 8
Seq primer: CGCCAAGCTGCAAATTAACCC
High quality sequence Stop: 558.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note="Organ: Spleen; Vector: pBluescript SK(+/-); Site_1: EcoRI; Site_2: MoI; This BS cDNA library was generated by subtraction of the original non-normalized bovine spleen library with 16,800 previously sequenced clones from a bovine placenta cDNA library. The original library was constructed as described by Band et al (2000), Genome Research 10(9): 1359 -1368.

New lipid metabolism enzymes useful for diagnosing, treating and preventing cancer, neurological disorders, autoimmune/inflammatory disorders, and cardiovascular disorders

Claim 1; Page 109; 122pp; English.

The sequence represents a novel human lipid metabolism enzyme (LME-2) of
the invention. The invention relates to novel human LME's, and the
the invention. The invention relates to novel human LME's, and the
the polynucleotides which identify and encode them. The enzymes of the
invention have expectation, neuroprotective, immunosuppressive,
anti-inflammatory, and cardiovascular activity. The polypeptides and
cardiovascular are useful in the diagnosis, treatment and prevention
of cancer, neurological discorders, autoimmune/inflammatory disorders, and
cardiovascular disorders, autoimmune/inflammatory disorders, and
cardiovascular disorders, autoimmune/inflammatory disorders, and
cardiovascular disorders, and in the assessment of the effects of
exogenous compounds on the expression of nucleic acid and amino acid
cardiovascular disorders, mouthine expression of expression of the may also be used to screen
compounds that modulate the activity of LME. Polynucleotides encoding
cuantify gene expression in biopsied tissues in which expression of LME
cuantify gene expression in biopsied tissues in which expression of the naturally occurring generate a transcript image of a
tissue or cell type, to generate hybridization probes useful in mapping
the naturally occurring generate hybridization probes useful in mapping
the naturally occurring generate hybridication probes useful in mapping
compounds in drug screening techniques. The polypeptide sequences and
compounds in drug screening techniques. The polypeptide sequences
compounds the drug screening techniques. The polypeptide sequences
compounds the drug screening techniques. The polypeptide sequences
compounds in drug screening techniques. The polypeptide sequences
compounds the drug screening techniques.
The polymorphisms.

New human proteins, useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cardiovascular disorders, autoimmune disorders and reproductive disorders 

Claim 11; Page 306-307; 318pp; English.

The invention relates to novel human proteins (NHP) and the nucleic acids that encode them and antibodies raised against them. CC nucleic acids that encode them and antibodies raised against them. The proteins, antibodies and nucleic acids are useful in the diagnosis, prevention and/or treatment or diseases and/or disorders corporations, associated associated involving vasoconstriction, erectile dysfunction, high blood pressure, circular disorders of small intestine, disorders of reproductive system cachexia, disorders of small intestine, disorders of pulmonary system, ce.g. male infertility and/or impotence), testicular cancer, lung tumours contral nervous system disorders, bone disorders, neurodegenerative contral nervous system disorders, bone disorders, disorders disease, Parkinson's disease, Huntington's disease, schizophrenia, mania, dementia, paranoia, cisease, Huntington's disease, schizophrenia, mania, dementia, paranoia, disease, huntington's disease, schizophrenia, mania, dementia, paranoia, corputal nervous system disorders (e.g. multiple sclerosis, espain disorders (e.g. multiple sclerosis, ischaemic contral nervous system disorders (e.g. multiple sclerosis, ischaemic contral vance, psoriasis and lupus erythematosus), neural system disorders, respiratory disorders, olfactory disorders and wound disease.

PLA2 has antiallergic, antinflammatory, antibacterial, tranquillser, immunosuppressive, vulnerary, antirheumatic and antiarthritic activities. Human secretory phospholipase A2 (PLA2), the gene encoding it and antibodies against it are useful for the diagnosis and treatment of secretory PLA2-associated diseases e.g. septic shock, trauma, pancreatitis, allergic rhinitis and chronic rheumatoid arthritis. The present sequence represents human PLA2.

                                                                                                                                                                     The present sequence is human phospholipase 1 (HPPLI). This protein is involved in the hydrolysis of membrane phospholipids. The protein and its coding sequence can be used to diagnose and treat the following: cancers such as prostate, breast and testicular cancers, autoimmune and inflammatory disorders such as AIDS, allergies, anaemia, asthma, atherosclerosis, Crohn's disease, diabetes mellitus, emphysema, Graves' disease, irritable bowel syndrome, multiple sclerosis, myasthenia gravis, psoriasis, rheumatoid arthritis and systemic lupus erythematosus, infection caused by viruses, fungi, bacteriia, parasites and protozoa, and reproductive disorders including infertility, disruptions of the menstrual cycle, polycystic ovary syndrome, ectopic pregnancies, disruptions of spermatogenesis, cancers within the reproductive tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 63 CCHAHDCCYQELFDQGCHPYVDHYDHTIENNTEIVCSDLNKTECDKQTCMCDKNMVLCLM 122

The invention relates to polynucleotides encoding proteins CG122, CG179, CG654, CG121, CG162, CG27, CG153 and CG168 which are related to proteins involved in lipid metabolism and cardiovascular disease such as human polipoproteins. lipases and lipoprotein receptor proteins. These DNA apolipoproteins, lipases and lipoprotein receptor proteins. These DNA cand protein sequences are useful for treating or preventing disorders expression and for treating lipid metabolism, cardiovascular diseases and thrombosis. Antibodies against these proteins are useful for expression and thread levels of these sequences. All polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them and cells expressing All proteins are useful for identifying a consequence in the sequences are also useful for useful for use in treatment of a pathology related to the appearant expression or physiological interactions of this polypeptide. Vectors comprising these DNA and protein sequences are also useful for the nucleic acids and polypeptides of the invention are also useful for the treatment of occlusive cardiovascular diseases, myocardial infarction, cerebral isothemia, angina, arterial thrombosis, coronary artery thrombosis and cerebral artery thrombosis of are used in gene therapy. The present sequence is human CG95 (or C870)
                                                                                                                                                                                                                                                                                    Nucleic acids encoding human apolipoproteins, lipases, and lipoprotein receptor polypeptides, useful for preventing diagnosing and treating lipid metabolism disorders, thrombosis and cardiovascular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Tang TY, Zhou P, Goodrich R;

The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4

This sequence represents a mouse secreted phospholipase A2 (secreted PLA2). A cDNA was initially identified in an EST (expressed sequence tag) database, and a fragment (AAA72077) was isolated from cDNA derived from several mouse tissue types using primers AAA72078-A72081). The full length cDNA was generated using primers AAA72078-A72088. The invention relates to the novel secreted PLA2, nucleic acids encoding it, and variants of the protein which retain phospholipase A2 activity. It also encompasses an expression vector and host calls comprising DNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     murine secreted PLA2, a method for the recombinant production of the protein, a method of screening potential inhibitors of the protein and the compounds thus identified, and an antibody specific for murine PLA2. The antibody can be used for the diagnosis of a variety of diseases.
                                                                                                                                                                                                                                                                                                                                                                                                            Secreted phospholipase A2; PLA2; mouse; murine; recombinant production;

The present invention describes human secretory phospholipase A2 (PLA2). PLA2 has antiallergic, antiinflammatory, antibacterial, tranquillser, immunosuppressive, vulnerary, antirheumatic and antiarthritic activities. Human secretory phospholipase A2 (PLA2), the gene encoding it and antibodies against it are useful for the diagnosis and treatment of secretory PLA2-associated diseases e.g. septic shock, trauma, pancreatitis, allergic rhinitis and chronic rheumatoid arthritis. The present sequence represents mouse PLA2, which is used in an example from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   64 CHAHDCCYQELFDQGCHPYVDHYDHTIENNTEIVCSDLNKTECDKQTCMCDKNMVLCLMN 123

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5,
                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a mouse secretory type phospholipase A2 (PLA2) protein. The mouse secretory type PLA2-like protein can be used for screening in the development of inhibitors against the function of the protein. The present sequence represents mouse secretory type PLA2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DWCCHAHDCCYQELFDQGCHPYVDHYIENNTEIVCSDLNKTECDKQTCMCDKNMVLC 120

This invention relates to human secretory phospholipase A2 (PLA2) protein and the gene encoding it. Inhibitors of phospholipase A2 have antibacterial; immunosuppressive; antinitammatory; tranquilliser; vulnerary; antiasthmatic; antiallergic; antirheumatic; and antiarthritic activity. The PLA2 protein, gene and an anti-PLA2 antibody are useful in the diagnosis of PLA2 associated diseases e.g. septic shock, adult respiratory distress synfrome, pancreatitis, tranma, bronchial asthma, respiratory distress synfrome, pancreatitis, tranma, bronchial asthma, allergic rhinitis and rheumatoid arthitis. The present sequence is used in the represents murine PLA2. The murine PLA2 gene sequence is used in the invention for the identification and characterisation of the human PLA2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human secretory phospholipase A2 and encoded gene, useful in diagnosis of and screening drug candidates for treating associated diseases e.g. septic shock, adult respiratory distress syndrome and rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DWCCHAHDCCYQELFDQGCHPYVDHYDHIIENNTEIVCSDLNKTECDKQTCMCDKNMVLC 120

This invention relates to human secretory phospholipase A2 (PLA2) protein and the gene encoding it. Inhibitors of phospholipase A2 have antibacterial; immunosuppressive; antinflammatory; tranquilliser; vulnerary; antiasthmatic; antialergic; antirhemmatic; and antiarthritic activity. The PLA2 protein, gene and an anti-PLA2 antibody are useful in the diagnosis of PLA2 associated diseases e.g. septic shock, adult respiratory distress syndrome, pancreatitis, trauma, bronchial asthma, allergic rhinitis and rheumatoid arthritis. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human secretory phospholipase A2 and encoded gene, useful in diagnosis of and screening drug candidates for treating associated diseases e.g. septic shock, adult respiratory distress syndrome and rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  80 HPYVDHYDHTIENNTEIVCSDLNKTECDKQTCMCDKNMVLCLMNQ--TYREEYRGFLNVY 137

clone lambda SPLA2cDNA-4 is one of four clones identified when probe oligo 2905 (AAN91257) was used to screen a cDNA library constructed from polyA+ message from a peritoneal cell RNA. It encodes the entire SPLA2 type A sequence which is given here. The mature peptide sequence (see FT) has a calculated molecular weight of 13,919 daltons. The same amino acid sequence is also encoded by the exons of clone lambda

Acid stable phospholipase A2 - used for prodn. of antibodies and in the treatment or diagnosis of inflammation of diseases.

# Claim 44; Fig 12; 84pp; English.

The protein sequence was deduced from a DNA sequence obtd, from a genomic DNA library which was prepd. from a mutant fibroblast cell genomic DNA library which was prepd. from a mutant fibroblast cell allowable to be incomplete at the N-terminal since signal sequence is thought to be incomplete at the N-terminal since no promoter-like sequences are found in the DNA within 100 nucleometres of the promoter protein confirmed results obtd. By direct sequence of the mature protein confirmed results obtd. By direct sequencing of the purified protein. This sequence represents an amphiphilic alphateristic purified protein confirmed results obtd. By direct sequencing of the cresidues [e.g. Leu (22), Phe (25), and lie (29)] and there is a cluster of basic amino acids [e.g. Arry (27), Lys (30) and Lys (35)] of PLA_2. There is a characteristic stretch of residues which comprises part of the calcium binding loop: Tyr(44)-Gly-Cys-x-Cys-wick obstitute the active site (see features) are also present, and the protein exhibits the placement of half-cysteine residues typical of a Gp II PLA_2, having a Cys residue at position 70 and a process of the calcium binding loops are also present, and the protein exhibits the placement of half-cysteine was and C. atrox venom.

The CDNA was amplified using the primer sequences given in AAQ26370-1 by PCK from a human lung CDNA library. The CDNA sequence was used in the construction of an expression vector which further comprised a promoter and a dominant control region. This vector was used in an expression system comprising a mammalian cell transformed with the vector. This expression system could be used to prepare pharmacologically useful polypeptides eg. human growth hormone (HGH), granulocyte-colony stimulating factor (G-CSF) and PLA2, and for gene therapy. The mammalian host comprises erythroid cells and a

Patent No. 632204.7
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Tischfield, Jay A.
APPLICANT: Seilhamer, Jeffrey J.
APPLICANT: Seilhamer, Jeffrey J.
TITLE OF INVENTION: Mammalian Phospholipase A2 Nucleotide
TITLE OF INVENTION: Sequences and Low Molecular Weight Amino Acid Sequences
TITLE OF INVENTION: Encoded Thereby, Antisense Sequences and Nucleotide
TITLE OF INVENTION: Sequences Having Internal Ribosome Binding Sites
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 DWCCHAHDCCYQELFDQGCHPYVDHYDHTIENNTEIVCSDLNKTECDKQTCMCDKNMVLC 120
